

Sovereign Orchestration Workspace

Continuation Baseline Packaging Report

FINAL STATUS	PACKAGE_BLOCKED_SMOKE_START_AND_OPERATOR_STATE_CHANGED
Snapshot	2026-08-15 21:06:26 -05:00 / 2026-08-16 02:06:26 UTC
Repository	HEAD bad029e76a0bcc2f57062245ccf67ddf9394e47d on main

Outcome

A clean candidate ZIP was created and passed entry, exclusion, secret, provenance, and byte-identity audits. It was not promoted because the extracted package could not start Electron after the authorized npm ci workflow, and because the operator's Sovereign instance changed from running to stopped during packaging.

SOURCE PRESERVED	PASS	HEAD, worktree status, full tracked fingerprint, and critical SHA-256 values were unchanged.
ARCHIVE AUDIT	PASS	900 entries, one top-level root, no forbidden paths, all required files present.
STARTUP SMOKE	FAIL	Electron package metadata installed, but electron.exe and path.txt were absent after bounded retries.
PROMOTION	NOT PERFORMED	No final release ZIP or checksum file was created.

Candidate ZIP

D:\multi model terminal app\RELEASE_STAGING\SOW_CONTINUATION_BASELINE_20260815_210626.candidate.zip

Size: 4,619,327 bytes (4.41 MiB) | Entries: 900 | Root: SOVEREIGN_ORCHESTRATION_WORKSPACE

SHA-256: 32f157b117ee70f17bafba9303a17a2adb5eab495fd554bd4e559a837aa2f3d7

The candidate is complete but is not release-ready.

1. Source Snapshot

Source root	D:\multi model terminal app\sovereign-orchestration-workspace
HEAD / branch	bad029e76a0bcc2f57062245ccf67ddf9394e47d / main
Tag count	50
Git describe	gate/phase-18e-95-gbad029e
Tracked fingerprint	cd052ca22fd3be1173461e5c83b24b296f002fd5d1157a9faaa8642fb7cc2b9b

Authoritative worktree entries

Entry	SHA-256
docs/loop/LOOP_STATE.json	981a97f42ae7dccd390eced5036bedb42e87635d07e0d31b4f048932bd5fe97b
docs/registers/UNRESOLVED_ISSUE_REGISTER.md	687acf7af073d7cd8eb8e213538076c31bca94e825e19770f46c970b0fb18e19
docs/evidence/PHASE19_UNIT10_U339_SUITE_AND_GATE.md	d5b11a5da8e31eb97f2c475a1c0acf90bf67dc1a390b56686c764fbb4dcb1aa7

Worktree at snapshot

```
M docs/loop/LOOP_STATE.json
M docs/registers/UNRESOLVED_ISSUE_REGISTER.md
?? docs/evidence/PHASE19_UNIT10_U339_SUITE_AND_GATE.md
```

Source changed by packaging task: **NO**. No Git index lock was created or removed.

2. Package Composition

Included	Excluded
- Electron desktop shell and package lockfile. - Python control plane, adapters, MCP server, persistence, terminal, scheduler, conductor, debate, voice, and node runtime packages. - Schemas, tests, canonical documents, registers, evidence, loop/operator documentation, and project reports. - Three packaging documents and WORKTREE_PROVENANCE.patch.	- Git metadata, node_modules, virtual environments, caches, dist/build output, logs, SQLite state, and environment files. - .sovereign_store, approvals, recovery, voice captures, live authorization switch, and agent-session directories. - No credentials or genuine secret material were found.

3. Smoke Test

The candidate was extracted into the authorized throwaway smoke location with exactly one top-level root. The live authorization switch was absent and its example file was present.

Check	Result	Evidence
Extract and tree shape	PASS	900 files; one SOVEREIGN_ORCHESTRATION_WORKSPACE root.
npm ci	FAIL	Commands exited 0, but Electron's path.txt and electron.exe were absent. Foreground-script and force-no-cache retries produced the same incomplete install.
npm.cmd start	FAIL	Electron failed to install correctly; process exited before Electron started.
Window render	NOT RUN	No Electron executable was available.
D-P16-0 receipt	NOT RUN	Self-check could not launch without Electron.
Shell denied-by-absence	NOT RUN	Shell did not start.
Python denied-by-absence	PASS	Authorization false, terminal allowance 0, and absent live_operation.json named with enforcement-by-absence.
Python import	PASS	control_plane imported successfully under py -3.12.
Provider and lease safety	PASS	No smoke provider process, .sovereign_store, or lease ledger was created.
Shutdown	PASS	No smoke Electron process started or remained.

Exact Python authorization result

```
{"control_plane_import": true, "authorized": false, "terminals_per_subscription": 0, "reason": "no live-operation config at ...\\config\\live_operation.json (enforcement-by-absence)"}
```

Dependency observation

npm ci also reported two high-severity audit findings in the existing lockfile. No dependency version, package file, or lockfile was changed.

4. Operator Instance and Preservation

At snapshot start	RUNNING
At completion	STOPPED
Started or stopped by packaging task	NO

The extracted Electron binary never launched, and no command targeted the operator instance. Because its state changed independently while packaging was in progress, the required running/stopped state match failed. It was not restarted merely to force compliance.

Source-preservation statement

No Sovereign Orchestration Workspace source, configuration semantics, register content, or accepted working-tree state was intentionally changed as part of this packaging operation.

5. Findings and Packaging Observations

- Electron restoration anomaly: npm lifecycle commands exited successfully while leaving only a partial Electron distribution and no executable.
- Two high-severity npm audit findings were reported; they were not repaired under this packaging directive.
- The first staging audit caught ten tracked files under .agents, .claude, .codex, and .grok. The clean candidate excludes them.
- build/ existed but was empty and was excluded.
- tools/spike_compositor/results/ contained 12 generated reports totaling 110,638 bytes and was excluded.
- A generated desktop loop log was excluded under the binding *.log rule.
- Git emitted its pre-existing CRLF warning for LOOP_STATE.json; source and staged SHA-256 values remained identical.
- The rejected preliminary staging scratch was retained because the environment deletion guard refused its removal.

6. Provenance Patch

Present: YES

SHA-256: d8884afdc78f2e8d3b511c561c4d727a08e9722eceb79f633cf1ece702b82835

Applies against HEAD bad029e76a0bcc2f57062245ccf67ddf9394e47d and covers tracked modifications only. The untracked Phase 19.10 evidence file is packaged directly.

7. Workspace Continuation State

Phase 19, unit 19.10 remains in progress. gate/phase-19 is not set. Four unrepaired findings and the unproven-claims list are carried in STATE_OF_THE_WORKSPACE.md inside the candidate ZIP.

Disposition: retain the candidate only as an unpromoted context carrier. Do not treat it as a tested continuation baseline until Electron restoration and the operator-instance preservation condition are satisfied in a fresh packaging attempt.
